DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/27/2007 has been entered.

Allowable Subject Matter

Claims 5 and 11-13 (renumbered 1-4) allowed.

The following is a statement of reasons for the indication of allowable subject matter: Claims 5 and 11-13 (renumbered 1-4) are allowed because a comprehensive search of prior art failed to teach, either alone or in combination, a multicarrier transmission method for multiplying transmit data individually by each code constituting orthogonal codes and transmitting each result of multiplication by a prescribed subcarrier, comprising the steps of assigning the same subcarriers selected from among multicarriers to a plurality of users and assigning plural different orthogonal codes to each user, applying identical transmit beam-forming processing to the transmit data of said plurality of users, which belong to a same directional zone and to which the same subcarriers have been assigned, and transmitting the beam-formed data of each user obtained by the beam-forming processing by performing code multiplexing using

said plural different orthogonal codes on the same subcarriers, as the applicant has claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Agee (US 7106781 B2) discloses a discrete multitone stacked-carrier spread spectrum communication method is based on frequency domain spreading including multiplication of a baseband signal by a set of superimposed, or stacked, complex sinusoid carrier waves.
